PROFESSIONAL SUMMARY

Computer Science and Engineering student who builds and ships working systems fast, including under early or unfinished tooling. Comfortable with ambiguity and breaking changes, with hands-on experience in containerized systems, RESTful services, and clean, modular architecture. Drawn to runtime and framework-level problems and eager to test and shape early-stage developer tools through direct, honest feedback.

TECHNICAL SKILLS

- Languages: Python, C++, JavaScript, Go, HTML5, CSS3
- **Systems & Architecture:** Distributed systems, containerization (Docker), REST/API design, MVC, OOP, System Design, Data Structures & Algorithms
- **Infrastructure & Tooling:** Docker, AWS, Git/GitHub, Linux, FastAPI, gRPC
- **Working style:** Rapid prototyping and iteration, debugging undocumented/early-stage tools, direct written feedback on APIs and dev workflow

PROJECTS

AI-OS — Gemini-Powered Web Operating System

github.com/nivas4506

- Built AI-OS, a web-based operating system interface deeply integrated with the Google Gemini API (@google/generative-ai SDK), bringing real-time conversational AI directly into a sleek, responsive browser UI.
- Architected the app on Vite for instant dev-server starts and Hot Module Replacement, structuring the codebase to be easily extensible with additional AI modules and agent functionality.

Student Grievance Redressal System

github.com/nivas4506

- Designed and built a full-stack platform with RESTful API endpoints and role-based access control, structured with clean MVC separation between service logic and interface.
- Containerized the app with Docker for consistent environments across development and deployment, and structured the codebase for straightforward extension as new endpoints were added.

AI Test Engineering Platform — Codex Hackathon

github.com/nivas4506

- Built and deployed a FastAPI (Python 3.13) platform that analyzes uploaded repositories and generates real tests via heuristic or OpenAI-backed generation, executing them with live runners (pytest, node --test) — shipped to production on Vercel with Google OAuth-backed sessions.
- Architected a decoupled planner → generator → executor → debugger pipeline wired into GitHub Actions and Jenkins CI/CD, reaching 70% coverage across 30 passing tests, and packaged it as an installable one-command CLI.

CERTIFICATIONS

- Introduction to Claude Cowork — Anthropic (2026)
- Deep Agents Project — Anthropic (Jun 2026)
- Programming for Everybody (Getting Started with Python) — University of Michigan, via Coursera (Sep 2025)
- Python Essentials 2 — Cisco Networking Academy & Python Institute (Jan 2026)
- Git/GitHub — CodeChef (Feb 2026)
- Learn C Programming — CodeChef (Jan 2026)
- Time Complexity — CodeChef (Jul 2026)

EDUCATION

B.Tech in Computer Science and Engineering

2025 – Present

KL University, Vaddeswaram, Andhra Pradesh — Expected Graduation: 2029

Intermediate (MPC)

2023 – 2025

Sri Chaitanya Jr. College — 91.6%

ADDITIONAL INFORMATION

- Actively building and shipping side projects to learn fast-moving tools and frameworks, and comfortable working against APIs that are still changing.
- Open to relocating for on-site, early-stage developer roles; interested in runtime systems, container orchestration (Docker, Kubernetes concepts), and AI-native application development.
